

H5P - Bringing Content Alive with an Open-Source Toolkit for Interactive Learning.

Robert Parker

Medicine Educational Development Unit

Keywords: interactive, microlearning, flexible, nimble, just-in-time

Abstract:

Normally a student encounters websites, videos, screencasts, pictures, diagrams, PDF lecture notes and guides that are relatively static learning objects online; but with H5P you can create an interactive layer without coding that is nimble and flexible and just-in-time. This agile development allows you to design microlearning on the fly, respond to changes in content and systems of delivery. But more importantly, it helps you think like a designer. A designer of the learning pathways and modes of experiencing knowledge.
